Daily Log

Day 1

Before we split up into groups we talked about MISL and DSTR robots. When we split up into groups we began to learn about social media that morning and I began to take pictures of the other team members. Cameron drilled into metal beams, and started building the frame, Blake began to code the computer, and Christa began to build the motors.

Day 2

On day 2, I began to set up my team's twitter account, logo, and I uploaded my logo to the twitter account. Cameron continued building the frame of the robot and finished the day off by adding the legs to the robot. Christa finished the motors and gave them to Cameron to install onto the robot. Blake continued to code the the computer.

Day 3

On day 3 Cameron finished building the frame. I learned from the Chase how to code. Christa helped finish the robot.
