Daily Log

Day 1

We got split into teams to build a DSTR robot. Eric was learning about the basics of Social Media during the first half of the day then he took pictures of the other team members. Santiago was fitting the batteries . While Matthew was cutting metal beams for the frame of the robot. Colin decided to create the software of the robot.

Day 2

Eric helped the mechanics and created a twitter account to post about our team. Santiago was soldering wires together for the robot. Matthew was butting the beams together to complete the frame. Colin was coding the instructions for controlling the robot.

Day 3

Santiago and Matthew were putting the frame and all the wires and motors together to complete the robot. Eric was learning about the basics of coding, and was working with Colin to complete a coding challenge.
